DATA SCIENCE INTERNSHIP

The Data Science Internship at Codomax Digital Solutions is a project-based learning program designed to help students develop practical data analysis and visualization skills using Python and industry-standard tools.

During this internship, participants will work on a Sales Data Analysis Dashboard, where they will collect insights from real-world datasets by performing data cleaning, analysis, visualization, and reporting. The program emphasizes transforming raw data into meaningful business insights that support data-driven decision-making.

Throughout the internship, participants will gain hands-on experience with Python libraries, data preprocessing techniques, exploratory data analysis (EDA), statistical analysis, and dashboard creation while following industry best practices.

By the end of the internship, participants will have built a professional data science project, strengthened their analytical and problem-solving abilities, and developed practical experience in working with datasets commonly used in business environments.

INTERNSHIP GUIDELINES

Please follow these guidelines throughout the internship:

- ✓ Complete the assigned daily task according to the provided schedule.
- ✓ Submit your completed task through the Daily Submission Form.
- ✓ Share your Codomax Offer Letter on LinkedIn before starting the internship.
- ✓ Publish a professional LinkedIn post every day showcasing your learning and progress.
- ✓ Mention Codomax Digital Solutions and use the official internship hashtags in your LinkedIn posts.
- ✓ Complete all assigned tasks before the specified deadline.
- ✓ Maintain active participation and consistent progress throughout the internship.

Tasks

Day 1 – Environment Setup Tasks: Learn about Data Science and install Python, VS Code, Jupyter Notebook and Git. Create a GitHub repository and run your first Python program. Expected Outcome: Development environment is ready. Submit Today's Task via Google Form

Day 2 – Python Basics Tasks: Learn variables, data types, operators, loops, functions and write simple Python programs. Expected Outcome: Basic Python programming skills developed. Submit Today's Task via Google Form

Day 3 – NumPy Tasks: Learn NumPy arrays, mathematical operations and practice array calculations. Expected Outcome: Understand NumPy fundamentals. Submit Today's Task via Google Form

Day 4 – Pandas Basics Tasks: Import Pandas, load a CSV dataset, view rows, columns and dataset information. Expected Outcome: Dataset successfully loaded. Submit Today's Task via Google Form

Day 5 – Data Cleaning Tasks: Handle missing values, remove duplicate records and correct data types. Expected Outcome: Clean dataset prepared. Submit Today's Task via Google Form

Submission Link : [Click Here](#)

Tasks

Day 6 – Data Filtering Tasks: Filter rows, select columns and sort the dataset using Pandas. Expected Outcome: Filtered dataset created. Submit Today's Task via Google Form

Day 7 – Data Analysis Tasks: Calculate total, average, minimum, maximum and count values from the dataset. Expected Outcome: Basic business insights generated. Submit Today's Task via Google Form

Day 8 – Data Visualization Tasks: Create bar charts, line charts and pie charts using Matplotlib. Expected Outcome: Charts created successfully. Submit Today's Task via Google Form

Day 9 – Dashboard Tasks: Combine charts and analysis into a single Jupyter Notebook dashboard. Expected Outcome: Mini dashboard completed. Submit Today's Task via Google Form

Day 10 – Export Data Tasks: Export the cleaned dataset to a new CSV file. Expected Outcome: Cleaned dataset saved. Submit Today's Task via Google Form

Submission Link : [Click Here](#)

Tasks

Day 11 – Business Insights Tasks: Write at least five observations from the dataset based on your analysis.
Expected Outcome: Insight report prepared. Submit Today's Task via Google Form

Day 12 – Project Improvement Tasks: Improve notebook formatting, comments, charts and code readability.
Expected Outcome: Professional notebook completed. Submit Today's Task via Google Form

Day 13 – GitHub Tasks: Upload the notebook, dataset, charts and README.md to GitHub. Expected Outcome:
Project available on GitHub. Submit Today's Task via Google Form

Day 14 – Final Submission Tasks: Submit the GitHub repository, notebook, cleaned dataset, charts, README and a 2–3 minute demo video through the Google Form. Expected Outcome: Project successfully completed.
Submit Today's Task via Google Form

WHAT YOU WILL GET

-  **Internship Completion Certificate**
-  **Professional Portfolio**
-  **Resume Enhancement**
-  **Networking Opportunities**
-  **Skill Development**

ABOUT COMPANY

Codomax Digital Solutions is a technology-driven software development and IT consulting company committed to delivering innovative digital solutions for businesses worldwide. We specialize in web development, full-stack application development, artificial intelligence, machine learning, UI/UX design, cloud solutions, and digital transformation services.

Alongside serving global clients, we are passionate about developing the next generation of technology professionals. Our internship programs are carefully designed to bridge the gap between academic learning and industry expectations by providing practical experience through real-world projects, professional mentorship, and structured learning.

At Codomax, we believe that hands-on experience is the foundation of a successful technology career. Every intern is encouraged to build industry-standard projects, collaborate using professional development practices, and develop the technical confidence required for today's competitive job market.

Our mission is to empower students with practical skills, industry exposure, and career guidance while delivering high-quality technology solutions to businesses across diverse industries.
